

<https://chatgpt.com/share/6a9773a1-f690-83ea-a947-2783679a7414>

Prompt 1:

can you give me an html to make a website that: Build and deploy a complete, professional portfolio website that meets the following requirements (at a minimum):

Content Requirements

- About You: Include your bio, photo, interests, and skills. Make it personal and engaging.
- Projects: Showcase your work. Start with placeholders for future projects, but include this portfolio project itself.
- Contact Information: Provide ways for visitors to reach you (email, GitHub, LinkedIn, etc.)
- Use a clean, modern design that's easy to read and navigate
- Be sure to properly credit any sources for images or text or templates you use

Technical Requirements

- Responsive Design: Must work well on desktop, tablet, and mobile devices
- Live Deployment: Hosted on GitHub Pages with a working URL
- Code Quality: Code should be well-structured and readable by someone with your level of experience -> and that looks like a sports roster online page(like: <https://sports.yahoo.com/nfl/teams/?guccounter=1>) and include creditting where get inspo from

Response 1:

Below is a complete **single-file index.html** you can start with. You only need an **images** folder containing your photo.

I created the images folder and placed the images I wanted to include inside it

Prompt 2: (the website was light theme and not the correct color scheme or layout I wanted)

can you match the color scheme more of yahoo sports site. please make design similar to this but make my project profolio like a sports "roster"/ player info page feel.

Response 2:

Here's a fully updated version with the **Yahoo Sports-inspired purple/black/white color scheme**, a cleaner sports-profile layout, responsive design, project placeholders, contact links, and attribution built in.

Prompt 3:

Can you help me make a carousel out of the portfolio score cards at the top?

Response 3:

Yes — and you only need to change three things: the HTML wrapper, the CSS, and add a little JavaScript. Replace your current CSS with this: ...

Prompt 4:

I want the carousel to be automatic sliding

Response 4:

then you can keep the cards exactly as they are and just auto-scroll the container with JavaScript.

Add this right before `</body>`: ...

Changed speed to carousel-scroll 35s linear infinite;

Made duplicate set to loop through

Prompt 5:

if i click on one of the cards will it take me to project section?

Response 5:

Not with the current code, because each `.highlight-card` is a `<div>`. But you can make each card clickable so it smoothly jumps down to the corresponding project.

Since your project section already has:

None

```
<section class="section-block" id="projects">
```

Change a card from:

```
<div class="highlight-card">
```

```
<div class="highlight-accent"></div>
```

TO

```
<a href="#projects" class="highlight-card">
```

```
<div class="highlight-accent"></div>
```

```
<div class="highlight-content">
```

AND

Change the specific projects to have ID too:

```
<article class="roster-row" id="portfolio-project">
```

Did this for #nba-prediction, dfs-optimizer, tartan-database, lineup-research, portfolio-project, spaceinvaders

Prompt 6:

Add my resume to the website: *uploaded resume.pdf*

Prompt 7:

I added your resume into the site in two ways: I replaced the placeholder Experience section with your actual BTASports, FTN API, Tartan Athletics Analytics, and SURA experience, and I added a dedicated Resume section with education, basketball leadership, technical skills, honors, and a **Download Resume** button. Those details come directly from your uploaded resume.

I also added **Resume** to both navigation bars in your existing portfolio structure.

I removed the experience, skills, and education sections to just keep about, projects, and contact

<https://chatgpt.com/share/6a97738a-8c18-83e9-b5bb-5e852946eda7>

Prompt 8:

can you make download resume, click github and click linkedin in a row below contact info with purple circles like resume is rn: <section class="section-block" id="contact"> <h2 class="section-title">Contact</h2> <div class="section-divider"></div> <div class="contact-grid"> <small>Email</small> nicoletimko@comcast.net <small>Phone</small> 484.688.3366

```
<small>GitHub</small> <strong>Click to View GitHub</strong> </a> <a class="contact-card"
href="https://www.linkedin.com/in/nicole-timko-78a711345/" target="_blank" rel="noopener
norereferrer"> <small>LinkedIn</small> <strong>Click to View LinkedIn</strong> </a> <a
class="resume-download" href="Nicole_Timko_Resume_2026.docx" download> Download
Resume </a> </div> </section>
```

Response 8:

Yes. The cleanest setup is to keep **Email + Phone** as the contact cards, then put **Resume + GitHub + LinkedIn** in one centered row underneath, all using the same purple-circle style.

Replace your contact section with: ... then add this CSS: ...

This created a new .contact-links-row/ .contact-link-button class and separated divider between contact card and the buttons. I created two separate grids for these rows

Prompt 9:

I want the cards and button links centered on th page

The key part is:

None

```
max-width: 820px;
```

```
margin: 0 auto;
```

That makes the contact grid 820px wide and centers that entire block.

Then:

None

```
justify-content: center;
```

centers your **GitHub / LinkedIn / Resume** row underneath it.

Prompt 10:

Copied code I just added and asked to adjust for mobile and tablet devices

Response 10:

Gave me the code

Prompt 11:

can i change email and phone to be just written under the contact links?

Response 11:

Yes — I think that would look cleaner. You can have the three purple buttons centered first, then a simple Email and Phone line underneath.

```
<!-- Contact Information --> <div class="contact-info"> <a href="mailto:nicoletimko@comcast.net"> nicoletimko@comcast.net </a> <span class="contact-separator">•</span> <a href="tel:4846883366"> 484.688.3366 </a> </div>
```

Add change your CSS to: ...

Replaced old `contact-grid` to `contact-info`

Prompt 12:

Why is there a gap between my School, Degree, Graduation, etc in the About section?

Response 12:

Yes — the gap is coming from `.bio-meta` being a **grid**.

Your `.bio-grid` has two columns, and the right column (`.bio-description`) is much taller. CSS Grid makes the left `.bio-meta` stretch to the same height as the right column. Since `.bio-meta` is itself a grid, its rows are being distributed across all that extra height.

Change:

None

```
.bio-meta {  
  display: grid;  
  font-size: 0.92rem;  
}
```

to:

None

```
.bio-meta {  
  display: flex;
```

```
flex-direction: column;
gap: 18px;
justify-content: flex-start;

font-size: 0.92rem;
}
```

Prompt 13:

how do i make nicoleportfolio on left and rest on right?

Response 13:

Yes — if you're talking about your **navigation bar**, where you want:

None

NicolePortfolio
Contact

About Experience Projects

the easiest way is to make the navbar a flex container with `justify-content: space-between`.

Changed header-main to include `justify-content: space-between`;

Prompt 14:

why does it let me slide left and right on my webpage?

Response 14:

If you mean the **entire webpage can scroll horizontally left/right**, something on the page is wider than the browser viewport.

Given the changes you just made, I'd first check your header. This can happen if `.header-main` has `width: 100% plus padding`.

Remove `width: 100%` from `header-main`
Also `overflow-x: hidden` in `body`

<https://chatgpt.com/c/6a9858e9-8374-83e9-ab44-bcc91952f6b8>

Other additions:

Added space invaders project, description, github link, etc

Added images to project rows

- Replaced `class="project-number"` with `class="project-image"`

Prompt 15:

can I make the images not an exact size but max width and height but take shape of png given

Response 15:

let each PNG keep its natural aspect ratio instead of forcing every image into the same square.

For example, structure each row like this: ... and CSS lik ...

I would actually go one step further and **remove the fixed height on `.project-image` too**, because your screenshot shows exactly why a fixed square container can look awkward. Use...

Prompt 16:

How do I make the image not overlap the text?

Response 16:

Yes — the issue is that the **image is allowed to grow wider than the image column**, so it spills into your text column.

Since you want the PNG to keep its natural shape **without overlapping the text**, let the **grid column constrain its width**.

Added max-width to project-image img. Then made width and height auto

Prompt 17:

If i want to hover over image and it be bigger, how would i do that

Response 17:

Yes. You can use a CSS `:hover` effect with `transform: scale()`.

For your project images, add: ...

I chose to make the scale 2.1

Since you **don't want the enlarged image covering your project text**, make it expand primarily toward the left:

Transform-origin: center left:

Prompt 18:

what is z index and transform origin?

Response 18:

They control two different things about your hover effect:

z-index controls **which element appears on top** when elements overlap

When the image gets bigger, it might overlap another element. **z-index: 10** tells the browser:

Put this image in front of elements with lower **z-index** values.

transform-origin controls **where the image grows from** when you use:

Prompt 19:

If I do numbers for some projects and images for others, can I make the number centered with the image?

Response 19:

If you want to keep your existing HTML structure and simply center the number relative to its column/image area, you can start with:

None

```
.project-number {  
  
    justify-self: center;
```

Prompt 20:

can i add my own font choices together to make my own font family in html?: font-family: serif

Response 20:

Yes. In CSS, `font-family` can contain a **list of font choices**. The browser tries them from left to right until it finds one installed/available.

I chose Courtier New, Tahoma, Verdana, sans-serif

Prompt 21:

can you put a container around Project Roster that is almost transparent and has curved edges

Prompt 22:

Yes. If you want the **entire Project Roster section** inside a subtle, almost-transparent rounded container, wrap it like this: ...

Did this for projects and career stats sections

Other additions:

- Added linked in, git hub, and resume links
- Added github link and demo/ project poster links under project status (they were in status-link class divider so i made the display for that flex and flex-direction: column so they stacked on top of each other)(did this myself (yay!) from catching on to the structure)
- Deleted repetitive double header -> only kept the one at very top
- Changed a bit of wording around (about page mainly since my project descriptions were from my resume)
